New Era Acoustigym provides a high performance flooring system for fitness studios and weights areas that require a high strength rubber floor surface, whilst offering the best Acoustic qualities for the building. The versatile leveling capabilities enable floor heights from 81mm to 459mm which makes it unique and great for problem areas that need a level floor finish. Acoustigym only uses recycled plastic and recycled rubber tyres, thus creating a fully sustainable system for your project and reducing waste for the environment.

Available exclusively from our distribution partner WFUK
